## WINDOWS 10 RECOVERY Software Recovery/Restore Options

Resetting lets you choose whether to keep your files or remove them, and then reinstalls Windows. To get started, go to Settings > Update & Security > Reset this PC > Get started and choose an option.

### KEEP MY FILES OPTION

- Reinstalls Windows 10 and keeps your personal files.
- Removes apps and drivers you installed.
- Removes changes you made to settings.
- Removes any apps your PC manufacturer installed. (If your PC came with Windows 10, apps from your PC manufacturer will be reinstalled.)

### REMOVE EVERYTHING OPTION

- Reinstalls Windows 10 and removes all your personal files.
- Removes apps and drivers you installed.
- Removes changes you made to settings.
- Removes any apps your PC manufacturer installed. (If your PC came with Windows 10, apps from your PC manufacturer will be reinstalled.)

If you're planning to donate, recycle, or sell your PC, use this option and choose to fully clean the drive. This might take an hour or two, but it makes it harder for other people to recover files you've removed.

### RESTORE FACTORY SETTINGS OPTION

- Reinstalls Windows 10 and removes your personal files.
- Removes apps and drivers you installed.
- Removes changes you made to settings.
- Reinstalls any apps your PC manufacturer installed on your PC.
- This option isn't available on all PCs.

## WINDOWS 7 RECOVERY Software Recovery/Restore Options

In the event of a hard drive or software failure, your computer has an integrated software program referred to as the Seneca Recovery Center, that allows you to restore any factory loaded program, device driver, and/or recover your entire system back to the day you received it from the factory.

1. While starting the computer, press the **F8** key and follow steps 2–5. Select **Repair Your Computer**, this will launch the **Seneca Recovery Center**. At the welcome screen select **Next** to enter the Seneca System Recovery menu.
2. You can select a Recovery with **Automatic Data Backup or a Full Factory Recovery** (the Full System Recovery option will destroy all user data).
3. After the Full Recovery is complete, you will need to re-install any programs that were installed after the system left the factory.
4. You will also need to reinstall operating system and application updates to the system as well.
