

POWER ADAPTER LOCK QUICK START GUIDE

Keep Your Power Adapter From Coming Unplugged

1. Locate the power port.

2. Push the power cord plug into the power port until it stops.

3. Push the textured silver ring forward and then turn clockwise to tighten. The silver ring will stop turning when it is flush with the power port.

4. The locking power adapter is now connected and locked to the system.

The power adapter lock system is a two part mechanism. It is made up of a power adapter plug and a textured ring to secures the plug into place.
